SYSC 3303 ELEVATOR PROJECT

Iteration #4

Group #3

We broke down the work initially between everyone as follows:

Imran: Acting as a floater helping everyone in every subsystem or task where it was required, focused primarily on fixing errors and what was unfinished from Iteration 3, Work breakdown, Diagrams, ReadMe.

Sukhrobjon: Worked on timing events for scheduler and elevator subsystems. Created the fault events in the event.txt, and event validation. Junit for the scheduler subsystem's timing events.

Ismael: Worked on the timing for the elevator subsystem and the Junit for the respective added faults and timing events.

Peng: Worked on elevator with Ismael, and worked on floor communication with the elevator, allowing arrival sensors to become functional.

Duabo: Javadoc, Junit test for scheduler subsystem.
